## Introducing Our Newest Retaining Wall Block!

### GravityStone Unit

Imagine the possibilities for artistic creativity by wall installers and/or design professionals in combining the colors, textures, and shapes of the individual GravityStone block products, with versatility in plan layout of the retaining wall and wall face patterns. These possibilities provide each structure with the opportunity for uniqueness that can accommodate (accent or blend with) or dominate a site or building structure. However the beauty of the GravityStone system is that the individual blocks break the repetitiveness of a large mass and are able to hide small movements and imperfections in installation to the casual observer.

The mortarless or “dry-stack” assemblies of GravityStone wall systems provide significant performance advantages over conventional (more rigid) retaining wall systems. Mortarless construction allows GravityStone blocks to move relative to each other in response to settlement or other loadings, eliminating the most visible signs (stair step cracks) of movement. Dry stacked gaps between blocks permit water to expel freely through the wall facing, reducing hydrostatic pressures behind the wall.

#### Versatility

GravityStone accommodates most any wall plan layout wavy, straight, convex and concave curves, or corners. This versatility furnishes designers and installers with many options to create a wall plan layout that fits a site or other architectural requirements, like stairs, tiered walls, steps in grade along wall, planters, or special geometry. Versatility also provides the wall installer economic advantages by permitting field changes that would be extremely costly with other wall systems, like altering wall plan for actual conditions (avoiding boulders or saving trees) or reducing excavation when rock foundations are encountered.

GRAVITY STONE UNIT  
STRAIGHT FACE  
8”h x 18”w x 12”d  
70 lbs

#### AVAILABLE COLORS

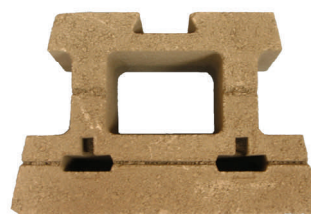

BUFF\*

PEWTER\*

*\* Because of printing limitations and lighting variances, the colors shown may vary from the actual block.*
