

ACME BLOCK & BRICK Inc.

Lipped Interlocking Retaining Wall Block!

Kingstonian Unit

Our best lipped interlocking retaining wall unit.. The ears on the back of the unit can easily be knocked off for making radiuses. This unit allows for various positive connections with reinforcement. Without the need of pins these units cost less to construct your retaining wall.

Key Features

Lipped Interlocking Connection System

- Higher unit-to-unit shear resistance.
- Increased vertical drainage through face units.
- Larger Open cores allow for gravel interlock across block interfaces.
- Improves connection strength between face units and geogrid.

Ease of Installation

- Tapered sides offer ease in constructing radii as tight as 4.5 feet.
- Unit's ears makes handling easier.
- The larger core area allows for rapid filling of drainage material.
- No pins required to stack units.

Design Versatility

- Battered setback or near vertical options available.
- Cores allow handrail or fence posts to be incorporated into the wall.

KINGSTONIAN UNIT
